Introduction

The DM5900 is a 1-channel video decoder designed for cameras with 720H CCD sensor. The DM5900 converts 6.5 MHz analog CVBS signals to digital 27 MHz CCIR656 signals. The DM5900 integrates an internal PLL. The DM5900 also features a patented fast switch function. With the fast switch function, the DM5900 can decode up to 2 analog CVBS with little frame rate loss.

Features

Video Decoder

- Accepts NTSC (M,J), PAL (B, D, G, H, I, M, Nc).
- Video decoder could be programmed to operate at 27MHz.
- Hardware Fast Switch function
- Fast Switch also controllable by software or external pin
- Software channel ID in active region
- 10-bits video ADCs with built in 6.5 MHz analog low pass filter
- Automatic gain control for Luminance and Chrominance
- Programmable brightness, contrast, saturation, hue, and sharpness
- 5-H comb filter for YC separation
- Support video interface YCbCr 4:2:2, 4:1:1, 4:2:0 format
- Support mirror function
- Chrominance line filter for PAL phase error
- DLL for video synchronization, supports 27MHz crystal within +/-1000 ppm variance
- Advanced video synchronization for weak and noisy CVBS. Supports video signal transmitted by 500-meter long cable
- Support line lock camera

Miscellaneous

- Use a single external 27MHz crystal to support 720H video
- One programmable PLL integrated
- Slave I2C bus
- Ultra low power consumption. Under 150mW for normal operation. Under 50mW for suspend mode.
- 32-pin LQFP (5mmx5mm) package or 32-pin QFN (4mmx4mm)
- 1.8V core power, 3.3V analog power and 1.8V analog power

Applications

Suggested applications include

- DVR
- Car DVR
- Video capture card

Terminal Assignment

Terminal Functions

Pin Name	Pin number	Type	Description
Analog Video Signals			
INA0	3	A	Analog input A0.
INA1	2	A	Analog input A1.
YGND	4	G	Analog ground. (used as signal input reference)
INB	6	A	Analog input B. (analog chroma input)

Pin Name	Pin number	Type	Description
Video Output Signals			
HSYNC	10	O	Horizontal Sync and multi-purpose output. See register for control information.
VSNC	9	O	Vertical Sync and multi-purpose output. See register for control information.
CLKX2	12	O	Data output clk.
MPOUT	11	O	Multi-purpose output pin. See register for control information.
VD7,VD6,VD5,VD4,VD3,VD2,VD1	14,15,16,17,19,20,21	I/O	Digital Video data output of 4:2:2 YCbCr[7:1]. VD[7] is the MSB
VD0/SIAD	22	I/O	Digital Video data output of 4:2:2 YCbCr. SIAD: The i2c interface address select pin 0. Default pull-down device ID: 8'hB8 otherwise device ID is 8'hBA

Pin Name	Pin number	Type	Description
Clock signals			
XTI	25	I	Clock input. A 27 MHz fundamental crystal or a single-ended oscillator can be connected
XTO	26	O	Clock output. For connecting a crystal

Pin Name	Pin number	Type	Description
General Signals			
RSTB	31	I	Reset input. Low active
PDN	30	I	Power down control pin. # is high active
INTREQ	32	O	Interrupt output signal

Pin Name	Pin number	Type	Description
Host Interface			
SCLK	28	I	The I2C serial interface Clock line.
SDAT	29	I/O	The I2C serial interface Data line.

Pin Name	Pin number	Type	Description
Power and Ground Pins			
VDD	23	P	1.8V digital core power
VSS	13	G	1.8V digital ground
VD33_0	18	P	3.3V digital I/O power
VD33_1	27	P	3.3V digital I/O power
VSSPST	24	G	3.3V digital I/O ground
AVDD	1	P	1.8V analog supply ADC.
AVSS	5	G	Analog ground.
AVDPLL	7	P	1.8V analog supply PLL
AVSPLL	8	G	Analog ground PLL

Block Diagram

Introduction

The DM5900 video decoder contains a Video Synchronization block, an AGC block, an YC separation block, a UV Demodulation block, a Luma/Chroma Processor block, a Mirror Function block and a BT 656 output block. A patented Fast Switch is also included.

In addition to CVBS, the DM5900 video decoder supports S-Video as well.

Video Synchronization

Video Synchronization performs video detection function. It automatically detects NTSC(M), NTSC(443), PAL(B,D,G,H,I), PAL(M), PAL(N), PAL(60). A smart video detection algorithm has been adopted. Therefore the DM5900 can perform fast and stable video synchronization even if the input signal is weak or the external crystal is with error as large as +/- 1000 ppm.

Automatic Gain Control

Automatic Gain Control (AGC) block performs both Luma AGC and Chroma AGC (CGAC). After video synchronization, Luma AGC adjusts input Luma level to the standard level (1Vpp). A further CAGC is performed after Luma AGC for signal with different Luma and Chroma attenuation.

Y/C Separation

Y/C Separation is for CVBS input only. After this block CVBS signal is separated into Luma and Chroma components. A 5-H 2D comb filter is adapted in the Y/C separation block.

UV demodulation

After Y/C separation, the UV demodulation block performs UV demodulation to the Chroma component. The phase and frequency of the UV demodulation is from a color burst subcarrier tracking block for both NTSC and PAL mode. A UV demodulation LPF is also adopted to filter out chroma noise.

Luma/Chroma Processor

This block contains a programmable Luma sharpness filter. Hue, Saturation, Brightness and Contrast adjustment are also supported. The adjusted video is then transformed from YUV to YCbCr domain for CCIR656 output interface.

Mirror Function

The DM5900 also supports mirroring function. When mirroring function is performed, the samples at each line are horizontally left-right flipped. The following figure illustrates the result of horizontal mirroring.

Video Interface

The DM5900 video decoder supports 27MHz BT.656 video output format with BT.601 synchronization signals. It also supports YCbCr 4:1:1 and 4:2:0 formats. A horizontal cropping function also included in this block.

Fast Switch Parameter RAM

The DM5900 features a patented hardware video source fast switch function. The Fast Switch block has a table which stores video characteristic. Each time HW switches to a previously tracked video source it could complete video synchronization within several lines. With this feature, the DM5900 can decode up to 2 CVBS with little frame rate loss.

Video Interface

The DM5160 outputs 27MHz CCIR656 with 720x480/720x576 resolution (conventional 720H). For these video outputs, SAV (Start of Active Video) and EAV (End of Active Video) are inserted to indicate active video interval. Each channel uses one output port to transmit video data, that is, luminance and chrominance data are transmitted through the same port. The output timing diagram is shown below.

YCbCr 4:2:2

The number of data cycles in active horizontal line will vary according to the output YCbCr 4:2:2 format. For video outputs, the active horizontal line contains 1440 cycles.

The DM5900 also supports the 4:2:0 and 4:1:1 format. The output timing diagram is shown below.

YCbCr 4:2:0

Odd Line:

Even Line:

The number of data cycles in active horizontal line will vary according to the output YCbCr 4:2:0 format. For video outputs, the active horizontal line contains 1080 cycles.

YCbCr 4:1:1

The number of data cycles in active horizontal line will vary according to the output YCbCr 4:1:1 format. For video outputs, the active horizontal line contains 1080 cycles.

SAV and EAV indicate the active video interval. The values of the first three bytes in SAV and EAV are invariant preamble: 0xFF, 0x00, and 0x00. Different values are designated to the last byte according to different conditions: Field, V time, and H time. The MSB of this byte is always set to 1 and it's followed by three bits to represent the condition of F, V, and H respectively. The last four bits are used as protection bits. The detailed code sequences of SAV and EAV are illustrated in the following table.

Condition			FVH Value			SAV/EAV Code Sequence			
Field	V time	H time	F	V	H	Byte 0	Byte 1	Byte 2	Byte 3
Odd	Active	SAV	0	0	0	0xFF	0x00	0x00	0x80
Odd	Active	EAV	0	0	1	0xFF	0x00	0x00	0x9D
Odd	Blank	SAV	0	1	0	0xFF	0x00	0x00	0xAB
Odd	Blank	EAV	0	1	1	0xFF	0x00	0x00	0xB6
Even	Active	SAV	1	0	0	0xFF	0x00	0x00	0xC7
Even	Active	EAV	1	0	1	0xFF	0x00	0x00	0xDA
Even	Blank	SAV	1	1	0	0xFF	0x00	0x00	0xEC
Even	Blank	EAV	1	1	1	0xFF	0x00	0x00	0xF1

BT601 Synchronization Signals

External syncs are provided via the following signals

- VSYNC (vertical sync signal)
- HSYNC (horizontal sync signal)
- FID (field indicator)

VSYNC, HSYNC and FID are programmed to be the external syncs for BT.601. The default setting for a 525/625 line video output are given as an example below.

UV demodulation low pass filter

PLL

The DM5900 has an internal PLL to generate the system and pixel clocks. A 27MHz is required for the PLL.

The default PLL setting is shown in the following table.

	Crystal In clock (MHz)	PLL out (MHz)	Function
PLL1	27	54	System/pixel clock

PLL default operated clock

The PLL parameters for various system configurations are shown in the following table.

	Crystal(MHz)	PLL out(MHz)	M	N	OD
PLL1	27	54	14	0	2

Formula:

$$\text{CLK_OUT} = \text{XIN} * (\text{M}+2) / [(\text{N}+2) * \text{OD} * 2]$$

Where CLK_OUT: PLL output frequency

XIN: PLL input frequency.

M: The numerator of PLL formula.

[N, OD]: The denominator of PLL formula.

Attention:

1. $100\text{MHz} \leq \text{CLK_OUT} * \text{OD} \leq 250\text{MHz}$
2. $1\text{MHz} \leq \text{XIN}/(\text{N}+2) \leq 25\text{MHz}$
3. $\text{OD} \geq 1$

Truth Table:

PD	BP	OE	CLK_OUT
0	0	0	CLK_OUT
0	0	0	XIN
Don't Care	1	0	XIN
Don't Care	Don't Care	1	0
Other			Undefined

PD: Power down control; Active high.

BP: Bypass XIN to CLK_OUT; Active high.

OE: CLK_OUT enable pin, Active low.

Host Interface

In the DM5900, I²C is used for setting configuration and parameters, for example, brightness, contrast, saturation, hue, and sharpness control. The typical timing diagram of I²C write and read access is illustrated in the following figure.

Write operation of I²C bus

Read operation of I²C bus

Write/Read Address							
Slave Address							R/W
1	0	1	1	1	0	SIAD	0: Write; 1: Read

The external Pull-up/Pull-down resistor connected to the pin “VD0/SIAD” indicates the device address SIAD. When pull-up resistor is connected to the pin, it indicates SIAD with a high value. Otherwise when pull-down resistor is connected to the pin, it indicates SIAD with a low value.

	Write Address	Read Address
SIAD = 0	B8	B9
SIAD = 1	BA	BB

Internal Control Registers

Note: Take 8'h00 for example – 8'= bit / h=hex / 00=value

Video Decoder

Address= 8'h37

MASK LINE							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	3'h0			0	3'h0		
	MSK_LINE_F1				MSK_LINE_F0		

MSK_LINE_F0: When REG36[0] = 1, Mask Field 0 last number of active lines (0-7)

MSK_LINE_F1: When REG36[0] = 1, Mask Field 1 last number of active lines (0-7)

Address= 8'h38

MONO TH							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
1	0	0	5'h1f				
MONO_EN			MONO_TH				

MONO_TH: MONO mode AGC threshold. AGC max value 30. when set MONO_TH 31.

AGC will always less than MONO_TH.

MONO_EN: Set 0, when no valid color burst detected.

Output CCIR656 Y through Notch filter.

Set 1, when no valid color burst detected. Output CCIR656

Y through Notch filter if AGC_GAIN ≥ MONO_TH, otherwise output CCIR656 Y with ADC data.

When No valid color burst detected (color kill mode). Output CCIR656 Cb/Cr with 128 (no color).

Address= 8'h39

COLOR BURST DETECT							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
1	3'h4			4'h5			
CAGCT RACKE N	COLBSTCYC			COLBSTHSEL			

COLBSTHSEL: Color Burst detection threshold.

4'h0 :COLBSTH = $0.125 * (\text{BLANK TIP} - \text{SYNC TIP})$

4'h1 :COLBSTH = $0.25 * (\text{BLANK TIP} - \text{SYNC TIP})$

4'h2 :COLBSTH = $0.375 * (\text{BLANK TIP} - \text{SYNC TIP})$

4'h3 :COLBSTH = $0.5 * (\text{BLANK TIP} - \text{SYNC TIP})$

4'h4 :COLBSTH = $0.09375 * (\text{BLANK TIP} - \text{SYNC TIP})$

4'h5 :COLBSTH = $0.078125 * (\text{BLANK TIP} - \text{SYNC TIP})$

4'h6 :COLBSTH = $0.0625 * (\text{BLANK TIP} - \text{SYNC TIP})$

4'h7 :COLBSTH = $0.03125 * (\text{BLANK TIP} - \text{SYNC TIP})$

4'h8 :COLBSTH = 0

When color burst peak to peak value larger than

COLBSTHSEL, it's been considered a good color burst signal cycle

COLBSTCYC: When COLBSTCYC numbers of valid color bust cycle detected, VD will decode video with color and Color AGC will optionally started. Otherwise will enter color kill mode

CAGCTRACKEN: CAGC Track enable. Set 0 to disable CAGC track

Address= 8'h3A

CAGC							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
1	0	0	0	0	1	0	0
CAGCEN	CAGCLOCKOPT	cagc_gain					

cagc_gain: RO. Chroma gain value. [5:2] integer, [1:0] fractional. (max 15.75, min 1)

CAGCLOCKOPT: Set 1, enable color AGC tracking until CAGC gain stable.

Set 0, color AGC tracking for first 15 video decoded frames.

CAGCEN : Set 1, enable color AGC.

Address= 8'h3B

Line Lock Camera							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
1	0	0	0	0	0	0	0
CAMLOCKOPT	LOCKCAM_DET	HLOCKDET1	ACTSHIFT				

ACTSHIFT: Active region shift, 2's compliment (-16~15)

HLOCKDET1: Set 1, to enable auto-detect Line Lock camera.

LOCKCAM_DET: RO, Line lock camera detected. (RO)

CAMLOCKOPT: Set 1, when line lock camera used.

Address= 8'h3C

LLOCKTH							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
8'h20							
LLOCKTH							

LLOCKTH: Line Lock auto detection threshold, valid only when 0x3B[5]=1.

When REG13[1]=1, line boundary difference within a field larger than LLOCKTH, Line Lock Camera detected.

Note: when clock offset tracking unstable and REG13[1]=1, line boundary difference might be large within a field.

Address= 8'h3D

VD_CFG							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	1	0	0	0	0	0	0
	ORSTOPT	OBFOVF	OBFUDF	LLFAR4FSOPT1			LLFAR4FSOPT

LLFAR4FSOPT: Set 1, decode video chroma without clock offset compensation.

Set 0, decode video chroma after clock offset compensation.

Set this bit to one for Line Lock Camera.

LLFAR4FSOPT1: Set 1, Auto adjust the active region related to clock offset.

When force line lock mode, set this bit to 1;

OBFUDF: RO. CCIR output buffer under flow.

OBFOVF: RO. CCIR output buffer over flow.

ORSTOPT: Set 1, Reset CCIR output buffer when output buffer overflow or underflow.

Address= 8'h3E

DROP FRAME							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	0	0	0	0	0	0	0
FRDROP							FRDRO PEN

FRDRO PEN: Frame drop enable. Set 1 to enable drop frame function.

FRDROP: Drop frame number:

Output Frame Rate = $(1 - 1/\text{FRDROP}) \times \text{Frame_Rate}$ when $\text{FRDROP} > 0$.

NTSC mode Frame_Rate = 30 frame/sec

PAL mode Frame_Rate = 25 frame/sec

Ex. FREROPEN=1, FRDROP=2, NTSC mode;

Output Frame Rate = $(1 - 1/2) \times 30 \text{ frame/sec} = 15 \text{ frame/sec}$

Address= 8'h3F

OUT BUFFER							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
8'h1a							
OBFTH							

OBFTH: CCIR656 output buffer ready threshold.

Once CCIR656 output buffer count is larger than

OBFTH, starts output CCIR656 active region.

PS. CCIR656 output buffer max length is 48, set OBFTH around middle level of buffer length.

Address= 8'h40

CCIROUT TYP EN

REVISION_ID: RO, The DM5900 CHIP version ID.

PLL

Formula:

$$\text{CLK_OUT} = \text{XIN} * (\text{M}+2) / [(\text{N}+2) * \text{OD} * 2]$$

Where CLK_OUT: PLL output frequency

XIN: PLL input frequency.

M: The numerator of PLL formula.

[N, OD]: The denominator of PLL formula.

Attention:

- 100MHz <= CLK_OUT * OD <= 250MHz
- 1MHz <= XIN/(N+2) <= 25MHz
- OD >= 1

Truth Table:

PD	BP	OE	CLK_OUT
0	0	0	CLK_OUT
0	0	0	XIN
Don't Care	1	0	XIN
Don't Care	Don't Care	1	0
Other			Undefined

PD: Power down control; Active high.

BP: Bypass XIN to CLK_OUT; Active high.

OE: CLK_OUT enable pin, Active low.

Fast Switch Control							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	0	0	0	0	0	0	0
						OFSWOPT	OFSWSEL

OFSWOPT: When 1 and REG04[3]=1, Fast switch select signal is OFSWSEL (REG6F[0]). Otherwise, the fast switch select signal is PIN MPOUT(FID).

OFSWSEL: Fast switch select signal. Only valid when OFSWOPT = 1.

Electrical Specifications

Absolute Maximum Ratings Over Operating Free-Air Temperature Range

Supply voltage range	
IOV _{DD} to DGND	-0.5V to 4.6V
DV _{DD} to DGND	-0.5V to 2.5V
PLL_AV _{DD} to PLL_AGND	-0.5V to 2.5V
CH1_AV _{DD} to CH1_AGND	-0.5V to 2.5V

Digital input voltage range, V _I to DGND	-0.5V to 4.6V
Input voltage range, XTAL1 to PLL_GND	-0.5V to 2.5V
Analog input voltage range A _I to CH1_AGND	-0.2V to 2.0V
Digital Output voltage range, V _O to DGND	-0.5V to 4.6V
Storage Temperature Range, T _{stg}	-65°C to 150°C

Recommended Operating Conditions

		MIN	TYP	MAX	UNIT
IODV _{DD}	Digital I/O supply voltage	2.97	3.3	3.63	V
DV _{DD}	Digital supply voltage	1.62	1.8	1.98	V
PLL_AV _{DD}	Analog PLL supply voltage	1.62	1.8	1.98	V
CH1_AV _{DD}	Analog core supply voltage	1.7	1.8	1.9	V
V _{I(P-P)}	Analog input voltage (ac-coupling necessary)	0.25		1.0	V
V _{IH}	Digital input voltage high	2		5	V
V _{IL}	Digital input voltage low	-0.3		0.8	V
V _{IH XTAL}	XTAL input voltage high	0.7 PLL_AV _{DD}			V
V _{IL XTAL}	XTAL input voltage low			0.3 PLL_AV _{DD}	V
I _{OH}	High-level output current			2	mA
I _{OL}	Low-level output current			-2	mA
I _{OH_SCLK}	SCLK high-level output current			4	mA
I _{OL_SCLK}	SCLK low-level output current			-4	mA
T _A	Operating free-air temperature	-40		85	°C

Crystal Specifications

CRYSTAL SPECIFICATIONS	MIN	NOM	MAX	UNIT
Frequency		27.0		MHz
Frequency tolerance		±100		ppm

Electrical Characteristics

$V_{DD} = 1.8\text{ V}$, $PLL_AV_{DD} = 1.8\text{ V}$, $CH1_AV_{DD} = 1.8\text{ V}$, $IOV_{DD} = 3.3\text{ V}$

For minimum/maximum values: $T_A = -40^{\circ}\text{C}$ to 85°C , and for typical values: $T_A = 25^{\circ}\text{C}$ unless otherwise noted

DC Electrical Characteristics

PARAMETER	TEST CONDITIONS (see NOTE 1)	MIN	TYP	MAX	UNIT
$I_{DD(I/O_D)}$ Digital I/O supply current	Color bar input		20.1		mA
$I_{DD(D)}$ Digital core supply current	Color bar input		75.4		mA
$I_{DD(A)}$ Analog supply current	Color bar input		39.5		mA
P_{TOT} Total power dissipation, normal mode	Color bar input		273	288	mW
P_{DOWN} Total power dissipation, power-down mode	Color bar input			17.8	mW
C_i Input capacitance	By design		8		pF
V_{OH} Output voltage high	$I_{OH} = 2\text{ mA}$	0.8 IOV_{DD}			V
V_{OL} Output voltage low	$I_{OL} = -2\text{ mA}$			0.22 IOV_{DD}	V
V_{OH_SCLK} SCLK output voltage high	$I_{OH} = 4\text{ mA}$	2.3			V
V_{OL_SCLK} SCLK output voltage low	$I_{OL} = -2\text{ mA}$			0.6	V

NOTE 1: Measured with a load of 15 pf.

Analog Processing and A/D Converters

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Z_i Input impedance, analog video inputs	By design	500			$k\Omega$
C_i Input capacitance, analog video inputs	By design		10		pF
$V_{i(pp)}$ Input voltage range *	$C_{coupling} = 0.1 \mu F$	0.25		1	V
ΔG Gain control range			12		dB
DNL DC differential non-linearity	A/D only		± 2		LSB
INL DC integral non-linearity	A/D only		± 3		LSB
Fr Frequency response	6 MHz		-0.9	-3	dB
SNR Signal-to-noise ratio	6 MHz, 1.0 Vp-p		50		dB
NS Noise spectrum	50% flat field		50		dB
DP Differential phase			1.5		°
DG Differential gain			0.5%		

* The 0.75-V maximum applies to the sync-chroma amplitude, not sync-white. The recommended termination resistors are 37.4 Ω .

Timing

Power-On reset Timing

NO.	PARAMETER	MIN	MAX	UNIT
t1	Delay time between power supplies active and reset	20	-	ms
t2	RESETB pulse duration	500	-	ns
t3	Delay time between end of reset to I ² C active	500	-	ns

Clocks, Video Data, Sync timing

Data Format : CCIR656 output					
PARAMETER	SYMBOL	MIN	TYP	MAX	UNIT
PIXCLK High pulse duration	t_{hw}	18.5			ns
PIXCLK Low pulse duration	t_{lw}	18.5			ns
CCIR656 data out setup time	t_{su}	18.5			ns
CCIR656 data out hold time	t_h	18.5			ns

Output:CCIR656

Figure 3-2 . Clocks, CCIR656 Output Data Timing

I²C Host Port Timing

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_1 Bus free time between STOP and START		1.3			μ S
t_2 Setup time for a (repeated) START condition		0.6			μ S
t_3 Hold time (repeated) START condition		0.6			μ S
t_4 Setup time for STOP condition		0.6			μ S
t_5 Data setup time		200			ns
t_6 Data hold time		0		50	ns
t_7 Rise time I2CD and I2CLK signal		250			ns
t_8 Fall time I2CD and I2CLK signal			250		ns
C_b Capacitive load for each bus line				120	pF
f_{I2C} I ² C clock frequency				400	kHz

	Write Address	Read Address
SIAD = 0	B8	B9
SIAD = 1	BA	BB

NOTES

1. DATUM T, U, AND Z TO BE DETERMINED AT DATUM PLANE H.
2. DIMENSIONS D AND E TO BE DETERMINED AT SEATING PLANE DATUM Y.
3. DIMENSIONS D1 AND E1 DO NOT INCLUDE MOLD PROTRUSION. ALLOWABLE PROTRUSION IS 0.25 PER SIDE. DIMENSIONS D1 AND E1 DO INCLUDE MOLD MISMATCH AND ARE DETERMINED AT DATUM PLANE DATUM H.
4. DIMENSION b DOES NOT INCLUDE DAM BAR PROTRUSION. ALLOWABLE DAM BAR PROTRUSION SHALL NOT CAUSE THE LEAD WIDTH TO EXCEED THE MAXIMUM b DIMENSION BY MORE THAN 0.08 mm. DAM BAR CANNOT BE LOCATED ON THE LOWER RADIUS OR THE FOOT. MINIMUM SPACE BETWEEN PROTRUSION AND AN ADJACENT LEAD IS 0.07 mm.

Disclaimer

The information appearing in this publication is believed to be accurate. Integrated circuits sold by DAVICOM Semiconductor are covered by the warranty and patent indemnification provisions stipulated in the terms of sale only. DAVICOM makes no warranty, express, statutory, implied or by description regarding the information in this publication or regarding the information in this publication or regarding the freedom of the described chip(s) from patent infringement. FURTHER, DAVICOM MAKES NO WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE. DAVICOM reserves the right to halt production or alter the specifications and prices at any time without notice. Accordingly, the reader is cautioned to verify that the data sheets and other information in this publication are current before placing orders. Products described herein are intended for use in normal commercial applications. Applications involving unusual environmental or reliability requirements, e.g. military equipment or medical life support equipment, are specifically not

recommended without additional processing by DAVICOM for such applications. Please note that application circuits illustrated in this document are for reference purposes only.

DAVICOM's terms and conditions printed on the order acknowledgment govern all sales by DAVICOM. DAVICOM will not be bound by any terms inconsistent with these unless DAVICOM agrees otherwise in writing. Acceptance of the buyer's orders shall be based on these terms.

Company Overview

DAVICOM Semiconductor Inc. develops and manufactures integrated circuits for integration into data communication products. Our mission is to design and produce IC products that are the industry's best value for Data, Audio, Video, and Internet/Intranet applications. To achieve this goal, we have built an organization that is able to develop chipsets in response to the evolving technology requirements of our customers while still delivering products that meet their cost requirements.

Products

We offer only products that satisfy high performance requirements and which are compatible with major hardware and software standards. Our currently available and soon to be released products are based on our proprietary designs and deliver high quality, high performance chipsets that comply with modem communication standards and Ethernet networking standards.

WARNING

Conditions beyond those listed for the absolute maximum may destroy or damage the products. In addition, conditions for sustained periods at near the limits of the operating ranges will stress and may temporarily (and permanently) affect and damage structure, performance and function.
